                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            RESULT 8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention describes antigenic peptides (I) comprising: (a) CC any one of 1601 sequences (see ABP82019 to ABP83619) of 12-24 amino acids. Also described: (1) an assay for the detection of a particular G CC protein-coupled receptor (GPCR) or a candidate polypeptide in a sample; and (2) an isolated antibody having high specificity and high affinity or a vidity for a particular GPCR. (I) can be used as GPCR modulators and in Gqne therapy. The antigenic peptides for GPCRs are useful in detecting an antibodies. The peptides and antibodies are also useful for detecting an antibodies. The peptides and antibodies are also useful for detecting the gresence or absence of corresponding GPCRs. The antigenic peptides for CC regeneration-related diseases, immunological and designing drugs for treating immune-related diseases, growth-related diseases, cell cc atherosclerosis, bacterial, fungal, protozoan or viral infections, conceroarthritis, osteoporosis, cancer, cardiomyopathy, chronic and acute inflammation, allergies, Crohn's disease, diabetes, graft versus host disease, Parkinson's disease, multiple sclerosis, pain, psoriasis, memory asthms theorements, mental retardation, memory antiper antiper of the protocode of the protocode of the parkinson's disease, multiple sclerosis, pain, psoriasis, memory asthms theorements, mental retardation, memory antiper antiper of the protocode of the protocode of the parkinson's disease, multiple sclerosis, pain, psoriasis, memory asthms theorements, mental retardation, memory antiper antiper of the protocode of the protocode
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Best Loc

The invention relates to isolated polynucleotide sequences. (I) is useful as hybridisation probes,

Claim 1; SEQ ID NO 4730; 103pp; English.

```
CC sequences. (I) Is useful as hybridisation probes, polymerase chain CC reaction (PCR) primers, oligomers, and for chromosome and gene mapping, CC and in recombinant production of (II). The polymerase chain CC in diagnostics as expressed sequence tags for identifying expressed cactivity of (II) or to treat disease states involving (II). (II) is useful in gene therapy techniques to restore mapping, CC quesful for generating antibodies against it, detecting or quantitating a cc upplement. (II) and its binding partners are useful in medical imaging CC involving aberrant protein expression or biological activity. The CC involving aberrant protein expression or biological activity. The CC adaptostics forensics, gene mapping, identification of mutations CC and to produce other types of data and products dependent on DAM and CC and to produce other types of data and products dependent on DAM and CC coding sequences. AAS64197-AAS94564 represent novel human diagnostic CC electronic format directly from WIPO a cc. fip. wipo.int/pub/published nor appear in the printed specification, but was obtained in

                            This invention describes novel nucleic acids (I; designated LOBO (long bones)) encoding proteins influencing bone development in mammals. The proteins of the invention reduce and/or inactivate bone extension (i.e. disgnostic acid molecules, proteins and antibodies can be used in the diagnostic or pharmaceutical compounds e.g. for gene therapy. The methods animals, especially a transgenic mouse for the study of diseases associated with bone development, e.g. spondyloepiphysal dysplasia and in the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              RESULT 10

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This invention describes novel nucleic acids (I, designated LOBO (long bones)) encoding proteins influencing bone development in mammals. The proteins of the invention reduce and/or inactivate bone extension (i.e. development), with exception of the skull and have osteopathic acidity. It is a proteins and antibodies can be used in diagnostic or pharmaceutical compounds e.g. for gene therapy. The methods animals, especially a transgenic mouse for the study of diseases associated with bone development, e.g. spondyloepiphysal dysplasia and in the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         AAZ23891 standard; DNA; 49999 BP

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    밁
                                                                                                This invention relates to a novel recombinant carcinoma-associated (CA) CC nucleic acid comprising a fully defined genomic, mRNA or coding sequences of mouse Rorc gene or human RORC gene, mouse mCG15938 or human gene BAT1, CC mouse Iqgapl gene or human IQGAP1 gene, mouse EZF29 gene or human CC hCG27579 gene, mouse KCG1910 gene or human KCNV9 gene, mouse PD93CC gene or human RCNV9 gene, mouse PD93CC gene or human CC concer cells, preferably lymphatic, breast, prostate or pitchelial cells. CC carcinoma-associated proteins (CAP) may have cytostatic activity and the CR gequences of the invention may enable the use of gene therapy or a CC development of an anticancer vaccine. The refore the invention may be CC useful for diagnosis and treatment of carcinomas, especially lymphoma CC carcinoma, breast cancer and prostate cancer. The CA genes may also be CC useful as DNA vaccines and for generating animal models of carcinomas. CC The present sequence is that of the mouse Pp3Cc gene genomic DNA CCC sequence of the invention.

                                                                                                                                                        밁
                                                                                                                                                                                                       The invention relates to recombinant carcinoma associated (CA) nucleic CC acid sequences from mouse and human (ADA)1482-ADA03094), and to CC carcinobinant carcinoma associated proteins (CAP) encoded by them. The CC invention also encompasses expression vectors and host cells comprising a CC cA nucleic acid, a polypeptide (especially an antibody) that specifically compasses to the protein, and a biochip comprising CA nucleic acid or CC fragments thereof. The sequences of the invention were identified using CC oncogenic retroviruses, which insert into the genome of the host organism CC at random. Many of these do not carry transduced host oncogenes or CC pathogenic trans-acting viral genes, meaning that cancer incidence is a direct consequence of the effects of proviral integration into host CC pathogenic trans-acting viral genes, meaning that cancer incidence is a Cd irect consequence of the effects of proviral integration into host CC pathogenic or a propensity to carcinoma by determination of the sequence CC carcinoma (specially breast cancer, prostate cancer, lymphoma or CC leukaemia) or a propensity to carcinoma by determination of the sequence CC acides, proteins and antibodies are also useful as CC therapeutic agents and in screening and evaluating drug candidates. The CC present sequence represents a specifically claimed murine CA nucleic acid sequence of the invention. Note: The complete sequence data for this CC patent did not form part of the printed specification, but was obtained crift electronic format directly from WIPO at

                                                                                                                                                                                                                                                                                                                         The invention relates to a novel recombinant nucleic acid comprising a nucleotide sequence selected from any of the 660 sequences fully defined in the specification. A polynucleotide of the invention has cytostatic activity, and may have a use in gene therapy, or in a vaccine. The carcinomas, e.g. lymphomas, cancers, neoplasm, adenocarcinoma, and sarcomas. The present sequence represents a mouse gene of the invention.

The Bax gene of the invention is useful for identifying Bax-CC resistant yeast or fungi, identifying, or obtaining and identifying CC Candida spp. sequences that are differentially expressed in a pathway CC eventually leading to programmed cell death or identifying inhibitors or inhibitor sequences of Bax-induced cell death. The products of the CC invention have cytostatic, fungicide; immunosuppressive, virucide and CC vasotropic activity and can be used in vaccines or for gene therapy. The city of the CC isolated nucleic acids, polypeptides, pharmaceutical compositions, CC antisense molecules and antibodies are useful as medicaments or in CC preparing a medicament for treating, preventing and/or alleviating such as cancer, or for preventing apoptosis in certain diseases. The compounds CC as cancer, or for preventing apoptosis in certain diseases. The compounds CC preparing a medicament for modifying the endogenic flora of humans and CC conter mammals. The vaccine is useful for immunising against yeast or CC ischaemia, diseases related diseases include autoimmune disease, CC ischaemia, diseases related with viral infections or neurodegenerations. CC this sequence represents a polynucleotide associated with the Bax gene described in the disclosure of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match

                                                                                                                                                                                                                                  epilepsy, Huntington's disease, stroke), immune/inflammatory (e.g. AIDS, allergies) and developmental (e.g. Hypothyroidism, Cushing's syndrome) disorders, or infections. It is also useful in assessing the effects of exogenous compounds on the expression of nucleic acid and amino acid sequences of NAAP. The NAAP or its fragments are useful in screening compounds for which acts as their agonist or antagonist. The microarray is useful in monitoring or measuring protein-protein interactions, drugter interactions, and gene expression profiles. NAAP DNA is used in
                                                                                                                                                                                                                                                                                                                                                                                                                                                       in diagnosing, treating and preventing diseases or conditions as with the decreased expression or overexpression of NAAP, such as proliferative (e.g. cancer, atherosclerosis), neurological (e.g.

                                                                                                                                                                                                                                          The present sequence is a gene encoding human alpha2B-adrenoceptor (alpha2B-AR) variant protein. Alpha2B-AR has a glutamic acid repeat celement (amino acids 298-309) off 12 glutamates, in an acidic stretch of CC 18 amino acids (amino acids 294-311), located in the third intracellular three glutamates from the Glu repeat (amino acids 307-309). Alpha2B-AR CC gene is located on chromosome 2. Alpha2-AR mediate many off the CC gene is located on chromosome 2. Alpha2-AR mediate many of the CC ghispiological effects of the catecholamines, norepinephrine and CC epinephrine. An antagonist of alpha2B-adrenoceptor is useful for treating CC disease involving vascular contraction of coronary arteries and a CC clinically expressed as coronary heat disease (CHD), unstable chronic CC disease involving wascular contraction of coronary arteries which is clinically expressed as prinzmetal's variant correction of acute myocardial infarction (AMI). Alpha2B-AR gene is used in

                                                                                                                                                                                                                                  The invention relates to a method for detecting a risk of hypertension by determining the pattern of alleles encoding a variant alpha-2B-adrenoceptor (AR) protein. The methods and compositions of the invention are useful for detecting risks and targeting treatment for hypertension. The kit is also useful for selecting for clinical drug trials testing the antihypertensive effect of selecting for clinical drug trials testing the antihypertensive effect of selecting the present sequence is human alpha

                                                                                                                                                                                                                                                                                           5
                                                                                                                                                                                                                                                                                                                                                                                                   The present invention relates to novel murine cDNAs produced using gene trapped sequences (GTSs) are individually identified novel genes, and are useful in functional genomic analysis, in the discovery and development of new therapeutic and diagnostic agents, for gene discovery, for diagnostic gene expression analysis, for cross species hybridisation analysis, and for genetic manipulations such as antisense inhibition or gene targeting. The polynucleotides of the invention are also useful for isolating cDNAs, genomic clones or full-length genes/polynucleotides, or their homologues, genomic clones or full-length genes/polynucleotides, or their homologues, heterologues, paralogues or orthologues, that are capable of hybridising to one or more of the new murine polynucleotide sequences. The polynucleotides are also useful for identifying the coding regions of the murine genome, and as hybridisation probes. ABX90657-ABX91862 represent the murine GTSs of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the USPTO web site at

                                                                                                                                                                                                                                                                                  문
                                                                                                                                                                                                                                                                                                               S
                                                                                                                                                                                                                                                                                                                                                                                                                  reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies are useful for generating antibodies of the detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. AAS64197-AAS94564 represent novel human diagnostic coding sequences of the invention. Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from MIPO at
                                                                                                                                                                                                                                                                                                                                                                  Best
                                                                                                                                                                                                                                                                                                                                                 Matches

                                                                                                                                                                                                                                                             The invention relates to isolated murine polynucleotides (I) comprising a CC contiguous stretch of at least about 60 nucleotides of a sequence CC (AB096733-AB098191) chosen from 1461 OMNIBANK gene trapped sequences CC (AB096733-AB098191) chosen from 1461 OMNIBANK gene trapped sequences CC polynucleotide sequences by comparing them to the novel gene sequences CC The novel genes and cells are useful in functional genomic analysis and continuous period of the novel gene sequences. CC and methods. (I) is useful for identifying the coding regions of the CC murine genome, to isolate cDNAs, genomic clones or full-length cC genes/polynucleotides or homologues, heterologues, paralogues or under stringent conditions. (I) can be incorporated into a phage display CC capable of binding an amino acid sequence encoded by an oligonucleotide capable of hybridising to one or more of the GTSs capable of binding an amino acid sequence encoded by an oligonucleotide temporal in arrays, such as gene chips, to identify and characterise CC antisense inhibition and gene targeting. Decreasing the level of expression of (I) and/or down regulating the level of expression of (I) and/or down regulating the level of groteins encoded by (I) is useful for treating development and cell corm part of the princed specification, but was obtained in CC electronic format directly from USPTO at

CC The present invention relates to novel murine cDNAs produced using gene CC individually identified novel genes, and are useful in functional genomic CC analysis, in the discovery and development of new therapeutic and CC analysis, for cross species hybridisation analysis, for cross species hybridisation analysis, for cross species hybridisation analysis, and for genetic committees of the invention are also useful for isolating cDNAs, CC polymucleotides of the invention are also useful for isolating cDNAs, CC to one or more of the new murine polymucleotides or their homologues, comparison of the new murine polymucleotide sequences. The murine grown, and as hybridisation probes. ABX90657-ABX91862 represent CC did not form part of the printed specification, but was obtained in CCC secondard directly from the USPPTO web site at

The invention describes an isolated NOVX polypeptide (I) comprising a cc sequence selected from a sequence (S1) of 1121, 635, 299, 1720, 176, 583, CC 214, 395, 1098, 134, 427, 1333, 407, 806, 804, 1253, 382, 1045, 284, 496, CC 506, 759, 390, 133, 215, 240, 1069, 116, 439, 1138, 477, 316, 269, 219, CC specification, and the mature form of S1. (I) is useful for treating or preventing a pathology associated with (I) in a subject, preferably CC human, or for identifying an agent that binds to (I), where the agent is cendding (I) or an anti-(I)-antibody (V) is useful treating or preventing constrained with (I) in a subject, preferably cc encoding (I) or an anti-(I)-antibody (V) is useful treating or preventing disease, stroke, parkinson's disease, Huntington's disease, multiple cc sclerosis, addiction, anxiety, pain, diabettes, glomerulonephritis, consisted assays, pancreatitis, obesity, ulcers, anaemia, cancer, trauma, viral, cc disease, pancreatitis, obesity, ulcers, anaemia, cancer, trauma, viral, cc disease, conservable, conservab
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        06-JUN-2001; 2001US-0256418P.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          0
```

Novel isolated NOVX polypeptide useful treating or preventing disorders or syndromes such as autoimmune disease, allergies, Alzheimer's disease,

Parkinson's

disease,

Huntington's

disease

9

multiple

sclerosis

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  CC The invention describes an isolated NOVX polypeptide (I) comprising a CC 214, 395, 1098, 134, 427, 133, 407, 806, 804, 1253, 382, 1076, 789, 390, 133, 215, 240, 1069, 116, 439, 1138, 477, 316, 269, 219, CC 305, 406, 460, 365, 380, 829 or 326 amino acids fully defined in the CC preventing a pathology associated with (I) in a subject, preferably CC acilular receptor or a downstream effector. (I), where the agent is CC encoding (I) or an anti-(I)-antibody (V) is useful for treating or CC disorders or syndromes such as autoimmune disease, altergies, Alzheimer's CC systemic lupus erythemacrosus, asthma, scleroderma, graft versus host CC disease, pancreatitis, obesity, ulcers, analy, atherosclerosis, disease, pancreatitic infections, cardiomyopathy, atherosclerosis acquired immunodeficiency syndrome (AIDS) or Crohn's CC disease. (I), (II) or (V) is useful in screening assays, detection assays cedicine (e.g., chromosomal mapping, tissue typing, forensic biology), predictive curials and pharmacogenomic), and in methods of treatment (e.g., dagnostic assays, prognostic assays, monitoring clinical condulate Novx activity. This sequence encodes a novel human Nov protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Ş

The polymucleotides are useful for CC expressing recombinant protein for characterisation, screening or CC expressing invade or reside, for comparing with the pathogenic CC similar biochemical activity and/or function, for comparing with DNA CC sequences of other related or distant pathogenic organisms to identify duplicated genes or paralogues having the same or potential orthologous essential or virulence genes, for selecting and CC antigen to raise anti-DNA antibodies or to elicit antipodies as an CC with which binding occurs or identify ing polymucleotides encoding the other protein CC interaction. The polypoptides may be used to raise antibodies or to elicit immune response, as a reagent in assays designed to quantitatively constituses in which pathogenic organism invade or to solate correlative receptors or ligands in the case or virulence correct. This polymucleotide sequence represents one of the essential correction such pathogenic organisms or to elicit another immune could be protein in biological fluids, as a marker for contents. This polymucleotide sequence represents one of the sesential correlative receptors or ligands in the case or virulence correction. The polymore or content is searched or reside, and to content of the polymucleotide sequence represents one of the essential corrections of the invention.
                                  New purified or isolated nucleic acids of essential genes of Aspergillus fumigatus, useful for treating or preventing infections by A. fumigatus, or for treating a non-infectious disease in a subject e.g. cancer.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to novel purified or isolated nucleic acids of cessential genes of Aspergillus fumigatus. The isolated nucleic acids of CC the invention are used to treat or prevent infections by a pathogenic corganism such as A. fumigatus, to treat a non-infectious disease in a composition of the prevent or inhibit formation of an object composition of a prevent or inhibit formation on a surface of a composition of a prevent or contain concamination of an object expressing recombinant protein for characterisation, screening or companisms invade or reside, for companing with the DNA sequence of A composition of the protein for companing with the DNA sequence of A composition of the protein for companing with the DNA sequence of A composition or related or distant pathogenic comparing with DNA composition or comparing the same or composition or comparing with DNA composition or comparing the protein antipodies, as an according or control of the polyment of a nucleic acid array for examination composition antipodies, as an according to the protein antipodies or to elicit immune response, as a reagent in assays designed to quantitatively control levels of the protein in biological fluids, as a marker for comparing the other protein which pathogenic organism invade or reside, and to composition of the polymerical composition of the case or virulence control of the protein of pathogenic organism invade or reside, and to composition of the pathogenic organism in the case or virulence control of the protein antipodies of the protein of pathogenic organism invade or reside, and to control of the protein of the correlative receptors or ligands in the case or virulence control of the protein of the protein of the core of the correlative receptors or ligands in the case or virulence control of the correlative 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       recombinant polymucleotide is used for producing a plant having a modified trait, the method comprising selecting a polymucleotide that encodes a polypeptide or an antisense nucleic acid, inserting the polymucleotide or antisense nucleic acid into an expression vector, introducing the vector into a plant or a cell of a plant to overexpress the polypeptide or antisense nucleic acid, thereby producing a modified plant, and selecting for a modified trait (e.g. increased production of agriculturally useful proteins or metabolic chemicals, pest tolerance, environmental stress response (e.g. drought), microbial disease resistance, herbicide resistance, seed and fruit yield, growth rate, leaf and flower sensecence and many other traits listed in the specification). The present sequence is one of the 232 polynucleotides encoding an A.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               sequence identity, where the plant possesses an altered trait as compared to a wild-type or reference plant, or the plant exhibits an altered phenotype as compared to a wild-type or reference plant, or the plant exhibits ectopic expression or altered expression of one or more genes associated with a plant trait as compared to a wild plant. Also included are a transgenic plant comprising the polynucleotides, a computer readable medium having stored sequence information, and identifying a homologue sequence from a database comprising a plurality of known plant sequences comprising inputting sequence information. The isolated or defined sequences given in the specification. The isolated or

                                                                                                                                                                                              CC polynucleotide that alters the plant's disease tolerance or resistance CC when compared with the same trait of another plant lacking the CC recombinant polynucleotide. The recombinant polynucleotide comprises a CC consecutive amino acids of any of 56 transcription factor proteins CC appearing as ABO4303-ABO43148. Also included are altering the disease CC identifying a transformed plant (by: (a) transforming a plant with the recombinant polynucleotide, (b) selecting the transformed plants; and (c) cidentifying a transformed plant with an altered disease tolerance or resistance), altering the expression levels of at least one gene in a CC plant by transforming the plant with the recombinant polynucleotide, (b) comparing the plant with the polypeptide or polynucleotide cited above; (c) selecting a database sequence; (c) polynucleotide cited above; (c) selecting a database sequence; (c) polynucleotide cited above; (c) selecting a database sequence that meets caplynucleotide at low stringency with the polypeptide or comparising: (a) providing a plant to tast polynucleotide; (b) hybridising the selected colerance or treis; and (d) transforming the test polynucleotide in the plant) and altering a plant's trait (comprising: (a) providing a plant of the plant the recombinant polynucleotide contabase sequence in the plant) and altering a plant's trait (comprising: (a) providing the test polynucleotide in comparison to alter a trait of the plant. The transgenic plant is useful in comparison to alter a trait of the plant. The transgenic plant is useful in comparison to alter a trait of the plant. The transgenic plant is useful in comparison to alter a trait of the plant and plants with improved tolerance or resistance to pathogens and pests. The plants have commercial utility of resent the plant at transcription factor cDNA of the plants that is an Arabidopsis thaliana transcription factor cDNA of the plants thaliana transcription factor cDNA of the plants that is an arabidopsis thaliana transcription factor cDNA of the

                                                                                                                                                                                        The invention relates to a number of isolated Arabidopsis thaliana cDNA sequences and their encoded proteins which are especially transcription factor related cDNA's and proteins. The isolated or recombinant plant producing transgenic plants with commercially valuable properties, i.e. modified or altered desirable traits as compared to a reference plant, such as an alteration in a plant growth characteristic, e.g. growth rate, flower senescence. Sequence information related to the polynucleotides flower senescence. Sequence information related to the polynucleotides and polypeptides can also be used in bioinformatic search methods. The plant is useful for growing a progeny plant from a parent plant. This sequence represents one of the cDNAs of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                     /clone_ib="Sigano mouse kidney mkia"
/note="Organ: kidney; Vector: pME18S-FL3; Site_1: DraIII
(CACTGTGTG); Site_2: DraIII (CACCATGTG); 1st strand cDNA
was primed with an oligo(dT) primer
[ATGTGGCCTTTTTTTTTTTTTTTT]; double-stranded cDNA was
ligated to a DraIII adaptor [TGTTGGCCTACTGG], digested
and cloned into distinct DraIII sites of the pME18S-FL3
vector (5' site CACTGTGTG, 3' site CACCATGTG). XhoI should
be used to isolate the cDNA insert. Size selection was
performed to exclude fragments <1.5kb. Library
constructed by Dr. Sumio Sugano (University of Tokyo
Institute of Medical Science). Custom primers for
sequencing: 5' end primer CTTCTGCTCTAAAAGCTGCC and 3' end
primer CGACCTGCAGCTCGAGCACA."

                                                                                                                                                                                                                                                                                                                                                  /note="Vector: pCMV-SPORT6 (Invitrogen); Site 2: Not1; Mouse cDNA project by the Laboratory of Genetics, National Institute on Aging (NIA), Intramural This is a long-transcript enriched cDNA library (Ref. cells were obtained from Dr. Brigid L.M. Hogan and RNA were cultured at 37. C, 5% CO2 in DMEM supplemented with acids, 2 mM glutamine, penicillin/streptomycin, 1 mm units of LIF per liter. Double-stranded CDNA library from Synthesized with an Oligo (dT) primer [Invitrogen: 2.5 up of total RNA, treated with To Long-linker LJ-Sall, purified by phenol/chloroform, and to Long-linker LJ-Sall, purified by phenol/chloroform, and to Long-linker LJ-Sall, purified by phenol/chloroform, and cDNAs were amplified by long-range high fidelity PCR using Ex Tag polymerase (Takara) with a primer Sall-S. The then purified by phenol/chloroform and converse out to were double digested with a primer Sall-S. The then purified by phenol/chloroform and Centricon 100. Then, the procedure by Dr. Kazuhiro Kondo at AISIN Cosmos. Then the cDNAs were cloned with The Ligation method. The procedure by Dr. Kazuhiro Kondo at AISIN cosmos. Then the community was constructed by Yulan Piao and Kazuhiro Kondo. The library was constructed by Yulan Piao and Kazuhiro
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 quality sequence stop: 330

Computational Analysis of Full-Length Mouse cDNAs Compared with
Human Genome Sequences Mamm. Genome. 12, 673-677 (2001)
Normalization and subtraction of cap-trapper-selected cDNAs to
prepare full-length cDNA libraries for rapid discovery of new
genes. Genome Res. 10 (10), 1617-1630 (2000)
RIXEN integrated sequence analysis (RISA) system-384-format
sequencing pipeline with 384 multicapillary sequencer. Genome Res.
10 (11), 1757-1771 (2000)
Computer-based methods for the mouse full-length cDNA encyclopedia: real-time sequence clustering for construction of a nonredundant cDNA library. Genome Res. 11 (2), 281-289 (2001) cDNA library was prepared and sequenced in Mouse Genome Encyclopedia Project of Genome Exploration Research Group in Riken Genomic Sciences Center and Genome Science Laboratory in RIKEN.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  prepare mouse tissues
